Project Title: Lost & Found Portal for College Campus

Introduction:

The "Lost & Found Portal for College Campus" is a database management system project aimed at creating a centralized platform for managing lost and found items within a college environment. This system will facilitate the reporting, tracking, and retrieval of lost items, streamlining the current processes.

Existing System and Its Drawbacks:

- **Existing System:** Currently, the process of managing lost and found items on campus is often decentralized and inefficient. Items might be reported to various offices (security, student services, library), or simply posted on notice boards, leading to a lack of coordination.
- **Drawbacks:** This decentralized approach leads to several problems:
 - Lack of a central repository for lost and found items.
 - Difficulty in tracking items and matching them with their owners.
 - Increased time and effort required to find lost items.
 - Potential for misplacement or loss of items due to poor management.

Proposed System and Its Advantages:

- **Proposed System:** The proposed system will be a web-based portal with a centralized database to store information about lost and found items. Users (students, faculty, staff) can report lost items, register found items, and search for items. The system will include features for administrators to manage the database, match items, and notify users.
- **Advantages:**

- Centralized platform for efficient management of lost and found items.
- Easy reporting and searching of items through a user-friendly interface.
- Improved tracking of items and automated matching of lost and found reports.
- Reduced time and effort in finding lost items.
- Increased security and accountability in the lost and found process.

Software Requirements:

- Frontend: HTML, CSS, JavaScript
- Backend: Node.js (for handling database interactions)
- Database: MySQL
- Development Tools: VS Code, Git

Conclusion:

The "Lost & Found Portal for College Campus" will provide a significant improvement over the existing decentralized system. By centralizing the management of lost and found items, the portal will save time and effort for the college community and increase the chances of items being returned to their rightful owners.
